

3D BRACELET JIG TEMPLATE

Glamour Bracelet

Materials: 23 inches of 14Ga or 16Ga Artistic or German Style Wire

- Set 14 pins into the 3D Bracelet Jig as shown following the guide. Using 14Ga or 16Ga wire from the spool, begin by placing the wire along the Jig at position 1A and twisting and turning the 3D Jig to wrap the wire tightly around each of the pegs with the loops pointing outward. Once the wire form is made, remove the pins. Use the appropriate size Artistic Wire Large Wire Crimp Tube to connect the two ends. To size the bracelet, either increase the angles to make smaller (gently cinch up the angles to make them sharper/steeper) or decrease the angles to make larger (gently pull apart/stretch to decrease the angle).

*This sample was made with
16Ga Artistic Wire.*

Tip: Use a second piece of wire (from the coil) over the top of the first wire to make a second bracelet! The second bracelet will be slightly larger because of the distance from the base of the Jig

*This sample was made with 14Ga
German Style Wire.*
